Industrial Regulator Series 1800/2000

AMC Quality System QMI is Accredited by:

ISO 9002 Certified

American Meter Series 1800 and 2000 Worker/Monitor Regulators

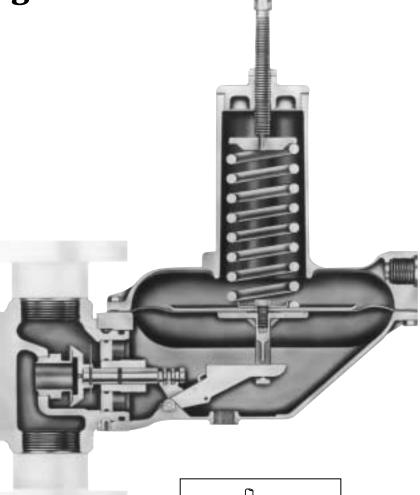

Worker/Monitor sets are commonly used to provide overpressure protection. A worker/monitor installation consists of a monitor with an external static connection and a worker with an internal static connection. The regulator selected to be the monitor is set at 2" to 5" w.c. above the worker. The external static connection is connected at a point free of turbulence and preferably a minimum of five pipe diameters downstream.

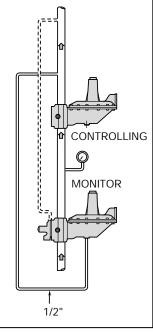

Improved Features 1800 and 2000 Series Monitor Conversion

American Meter offers four industrial monitor regulators – the 1803M, 2003M, 1883M and 2083M. Design improvements now enable *all* models to be configured as Monitor Regulators. This change was effective with all 1800 and 2000 Series Regulators manufactured after January 1994.

The advantage is that two models of the same regulator need not be stocked. All models are pre-machined to accept a monitor conversion kit. Refer to IMP 8740 for kit numbers and installation instructions.

When a regulator with an OPSO is converted to a monitor, a sense line must extend downstream of the worker, as shown in the diagram to the right.

Typical Upstream Monitor Installation

The American Meter Industrial Regulator

Monitor Conversion

The body and valve head are premachined to allow *easy conversion to a monitor model*. See page 2 for more information.

Rugged Construction

Valve heads are ductile iron which prevents thread damage. Available as 1-1/2" and 2" screwed, and 2" flanged connections. ANSI, BSP and DIN connections available.

Springs

The 1800 Series spring ranges from 3.5" w.c. to 5 psi outlet pressure. 2000 Series spring ranges from 1/2 psi to 15 psi outlet pressure. See page 12.

A 2" vent for Full Relief overpressure protection in three models, such as the 1813B. Partial Relief has 1" vent and 2000 Series has 3/4". See page 7 for relief performances.

Durability

Cast-aluminum top and bottom diaphragm case for long service life.

UPSO

Snap-acting lever for underpressure shutoff protection when line pressure drops drastically.

Interchangeable Orifice Available in sizes from 1/4" through 1-1/4" for a wide range of flow rates. One orifice is offered for both standard and OPSO models to minimize spare-parts inventory.

Overpressure Shutoff for positive protection of public buildings such as schools, churches, etc. See page 5.

Maintenance Three setscrews hold

diaphragm case to the valve head, providing the *easiest orifice and seat disc inspection* in the industry. **Pressure Taps** The 1800 and 2000 Regulators have inlet and outlet pressure taps.

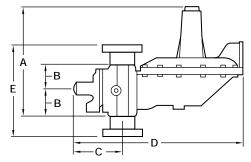

American Meter Regulators ... Other Features

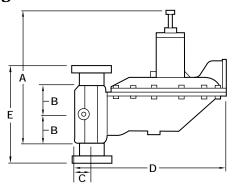

1800 Series low-pressure models have a maximum inlet pressure of 150 psi and offer outlet pressures ranging from 3.5" w.c. to 5 psi. 2000 Series high pressure models allow a maximum inlet pressure of 150 psi and outlet pressures ranging from .5 psi to 15 psi. The 1800 Series can be ordered as Full Relief, Partial Relief or No Relief Regulator as shown in the table. 2000 Series Regulators are non-relieving. Both models are available with Overpressure Shutoff, Underpressure Shutoff and monitor capabilities.

*A 10" flange valve head is an option; contact Sales Office for information.

American Meter UPSO ... OPSO ... OUPSO ...

Regulator Safety Features Available Exclusively From American Meter On Series 1800 and 2000 Industrial Regulators

Pressure control and automatic shutoff devices for the protection of public buildings, schools, theaters, hospitals, etc. are available in one complete package on several 1800 and 2000 Series Industrial Regulator models (see page 5). Installing one of these regulators provides automatic protection against possible extreme variations in either inlet or outlet gas pressure.

UPSO

The UPSO (underpressure shutoff) models provide complete shutoff protection in case of severely interrupted inlet gas pressure. If the inlet or outlet pressure is severely interrupted, causing the regulator to stroke to a full-open position, the shutoff closes, providing complete system safety.

The shutoff valve remains closed until manually reset.

How The UPSO Operates

When gas pressure under the main diaphragm falls below normal, the shutoff device is tripped and the spring, connected with the valve plunger, forces the valve seat against the orifice closing off gas flow. The UPSO must be manually reset to re-establish gas flow.

To reset the underpressure shutoff device (Figure 3), unscrew the reset plug with a wrench. When it becomes free of the threads, pull it out until it engages the reset mechanism. With the wrench, turn the reset shaft clockwise until the reset mechanism is engaged. Hold firmly in this position until normal pressure is established under the diaphragm and downstream line, and regulator operation is restored. Screw in the reset plug and tighten.

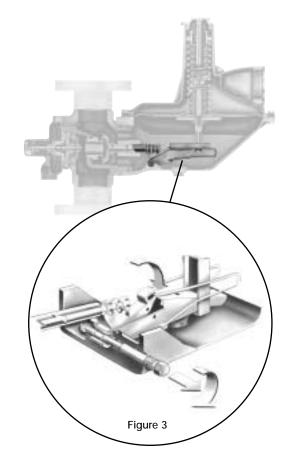

OPSO

Overpressure shutoff regulator models prevent excessive gas pressure from entering a building causing a hazardous condition. The shutoff device closes if the regulator outlet pressure rises above a maximum set point or set pressure.

How The OPSO Operates

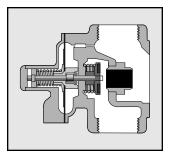

When line or static pressure increases to the specified overpressure shutoff setting, the pressure on the under side of the shutoff diaphragm over-balances the spring, forcing the diaphragm stem outward, releasing the plunger. This permits the shutoff spring to force the shutoff disc against the orifice, closing off gas flow. The OPSO assembly is part of the regulator but is not connected to the regulator operating mechanism.

When selecting a shutoff spring, a minimum differential of 14" w.c. between normal operating pressures and the shutoff pressure setting should be provided.

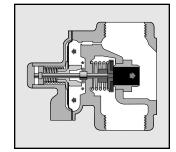

Overpressure Shutoff

(OPSO) in cocked position

Overpressure Shutoff

(OPSO) in tripped position

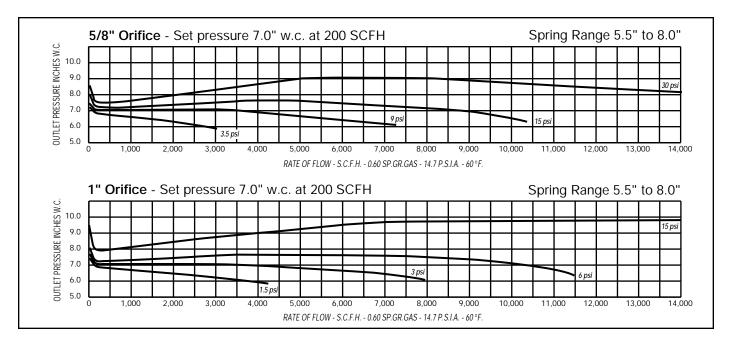

To reset the overpressure shutoff device, unscrew the seal cap, which opens the regulator orifice, permitting gas flow. Pull out on the seal cap until the overpressure shutoff device latches completely. Tighten the seal cap.

Do not trip the shutoff valve unless the seal cap is installed.

OUPSO

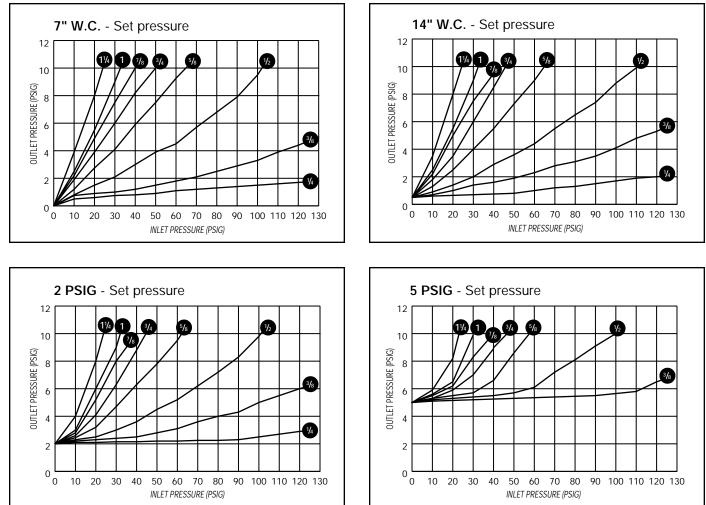

Overpressure and underpressure shutoff models combine both safety features for maximum protection. On these models, when the OPSO shuts off, the UPSO automatically trips, providing double assurance of positive gas shutoff. The overpressure shutoff device must be reset first followed by resetting the underpressure shutoff device.

Capacity Data

American Meter Model 1813B Regulator (1-1/2" and 2" sizes) Full Relief Valve Characteristics

Test performed with orifice valve blocked in wide open position. 2" screened vent-no vent pipe. Numbers in each circle indicate orifice size.

American Meter Regulator Parts

1800 SERIES LOW PRESSURE REGULATOR PRESSURE SPRINGS

3.5" to 6" w.c.	71424P017	Red
5.5" to 8" w.c.	71424P018	Orange
8.5" to 14" w.c.	71424P019	Yellow
14.5" to 28" w.c.	71424P020	Green
1 psi to 2 psi	71424P021	Blue
1.5 psi to 2.5 psi	71424P026	Brown and Blue
2 psi to 3 psi	71424P022	Brown and Green
3 psi to 5 psi	71424P023	Black and Green

2000 SERIES HIGH PRESSURE REGULATOR PRESSURE SPRINGS

.5 psi to 1 psi	71411P020	Brown and White
1 psi to 2.5 psi	71411P021	Purple and White
2.5 psi to 5 psi	71411P022	Orange and Black
5 psi to 10 psi	71411P023	Black
10 psi to 15 psi	71411P024	Yellow and Green

OPSO SHUTOFF SPRINGS

14" to 28" w.c.	70017P075	Red and Purple
1 psi to 2 psi	70017P076	Red and Brown
2 psi to 3 psi	70017P077	Purple
3 psi to 5 psi	70017P078	Orange and Yellow
5 psi to 8 psi	70017P079	Orange and Green
8 psi to 14 psi*	70017P078	Orange and Yellow
14 psi to 20 psi*	70017P079	Orange and Green

*To achieve these ranges, reducing ring 72646P001 must be used.

1800/2000 SERIES REGULATOR ORIFICE SIZES

Valve Head Size	Orifice Size	Part Number
1-1/2" and 2"	1/4"	72983P010
1-1/2" and 2"	3/8"	72983P011
1-1/2" and 2"	1/2"	72983P012
1-1/2" and 2"	5/8"	72983P013
1-1/2" and 2"	3/4"	72983P014
1-1/2" and 2"	7/8"	72983P015
1-1/2" and 2"	1"	72983P016
1-1/2" and 2"	1-1/4"	72983P017

These orifices are double-sided and work with both $\ensuremath{\mathsf{OPSO}}$ and non- $\ensuremath{\mathsf{OPSO}}$ Models.

American Meter Regulator Assembly Positions

Full-Open Regulator Capacity

= Maximum capacity of regulator

= Inlet absolute pressure (psia)

= Differential pressure (P₁ - P₂) G = Specific gravity of gas

= Outlet absolute pressure (psia)

= Orifice constant, see table

For sizing downstream relief valves, use the following formulas to determine the regulator full-open capacity: For critical flow rates For sub-critical flows -

	7/8"	1,100
	1"	1,425
	1-1/4"	2,150

Ordering Information

- 1. Model number.
- 2. Size of connection: screwed or flanged.
- 3. Inlet and outlet pressures.
- 4. Volume in scfh.
- 5. Kind of gas and specific gravity.
- 6. Assembly position.
- 7. Orifice size.
- 8. OPSO spring part numbers, if required.

A Complete Family of Gas Measurement, Pressure Regulation, and Testing Systems

Turbine Gas Meters High-performance meters provide accurate measurement of highvolume gas flow. Turbines are available from 3" to 12" line sizes and line pressures up to 1440 psig. See bulletin SB 4510 for more information.

Rotary Gas Meters RPM Series Rotary Meters are designed for commercial and industrial loads to provide accurate flow measurement and outstanding performance in the most adverse conditions. See bulletin SB 5500 for more information.

Diaphragm Meters American Meter's compact, lightweight, aluminumcase meters are designed to provide positive displacement accuracy for industrial or commercial loads. See bulletin SB 3510 for more information.

Pilot-Loaded Regulators 1800 PFM industrial regulators are designed for applications requiring medium-to-high capacity, extremely precise outlet-pressure control, and fast response to changing loads. See bulletin SB 8551 for more information.

American Meter Company is committed to a program of continuous quality enhancement. All equipment designed and manufactured by American Meter Company benefits from the company's quality assurance standards, which are approved to ISO 9001 or ISO 9002.

American Meter Company has a program of continuous product development and improvement; and, therefore, the information in this bulletin is subject to change or modification without notice.
